

---

# Park-Let, a new alternative in Fully Automatic Parking

---

A complete solution in the existing basement that includes car elevators

A similar solution in one level, but without car elevators

## Park-Let

- Space saving
- Scalable
- Fast and efficient
- Reliability
- Future sustainable
- Possible to charge electric vehicles
- Low investment costs

# Park-Let

## Background

Park-Let is a fully automatic parking solution developed by the brothers Mogens and Claus Hjort.

The requirement of 24 underground parking spaces to a residential property project, which only had an area for 10 conventional parking spaces, was the classic challenge. Through innovative ideas and persistent engineering work we succeeded in developing a fully automatic parking solution with capability for 24 cars.

During the developing process we became aware of the fact that we have developed a quite new alternative for parking that surpasses existing fully automatic parking solutions in many parameters.

## Facts about Park-Let:

**Space saving.** The parking solution utilizes the area in an optimal way. The space saving is 30-50% compared to “robot solutions”/conventional parking solutions.

**Fast and efficient.** Parking a car takes less than ½ minute and picking up a car takes from ½ to 2 minutes at a 30-cars parking solution.

**Flexible.** The parking solution is scalable in multiple solutions. We are able to present outlined projects of parking facilities to e.g. 500 cars in one or more levels, depending on the specific conditions.

**Low costs of investment and operation.** Depending on the size the costs of investment are EUR 13,500 – 20,000 per parking space.

**Reliability.** The parking facility is based on technically well-known components, which are durable and inexpensive in operation and maintenance. Service of the solution is simple and the service interval is two times per year. It makes up an estimated monthly cost of EUR 50 per car.

**Future sustainable.** Park-Let is the only known fully automatic solution that is able to offer automatic charging of electric vehicles and an App for easily parking/picking up the car.

**Broad segment.** A flexible parking solution designed for new and old properties - for basements, ground levels and in several levels. By changing a conventional parking solution to be fully automatic parking up to 50% parking spaces can be added.
